Real time critical?

Java on the hardware

Kirk software architecture:

Java on the hardware

Challenges in introducing Java on the hardware:

- Obtain a Java VM source compilable for your platform.
Easy!
- Include the Java VM source in your build environment.
Easy!
- Run the Java VM in parallel with existing software without compromising real time requirements.
Difficult!

threads.c: 167 lines

```
C/C++ - threads.c - Eclipse SDK
File Edit Refactor Navigate Search Project Run Window Help
currentThreadState->SP = Get_sp();

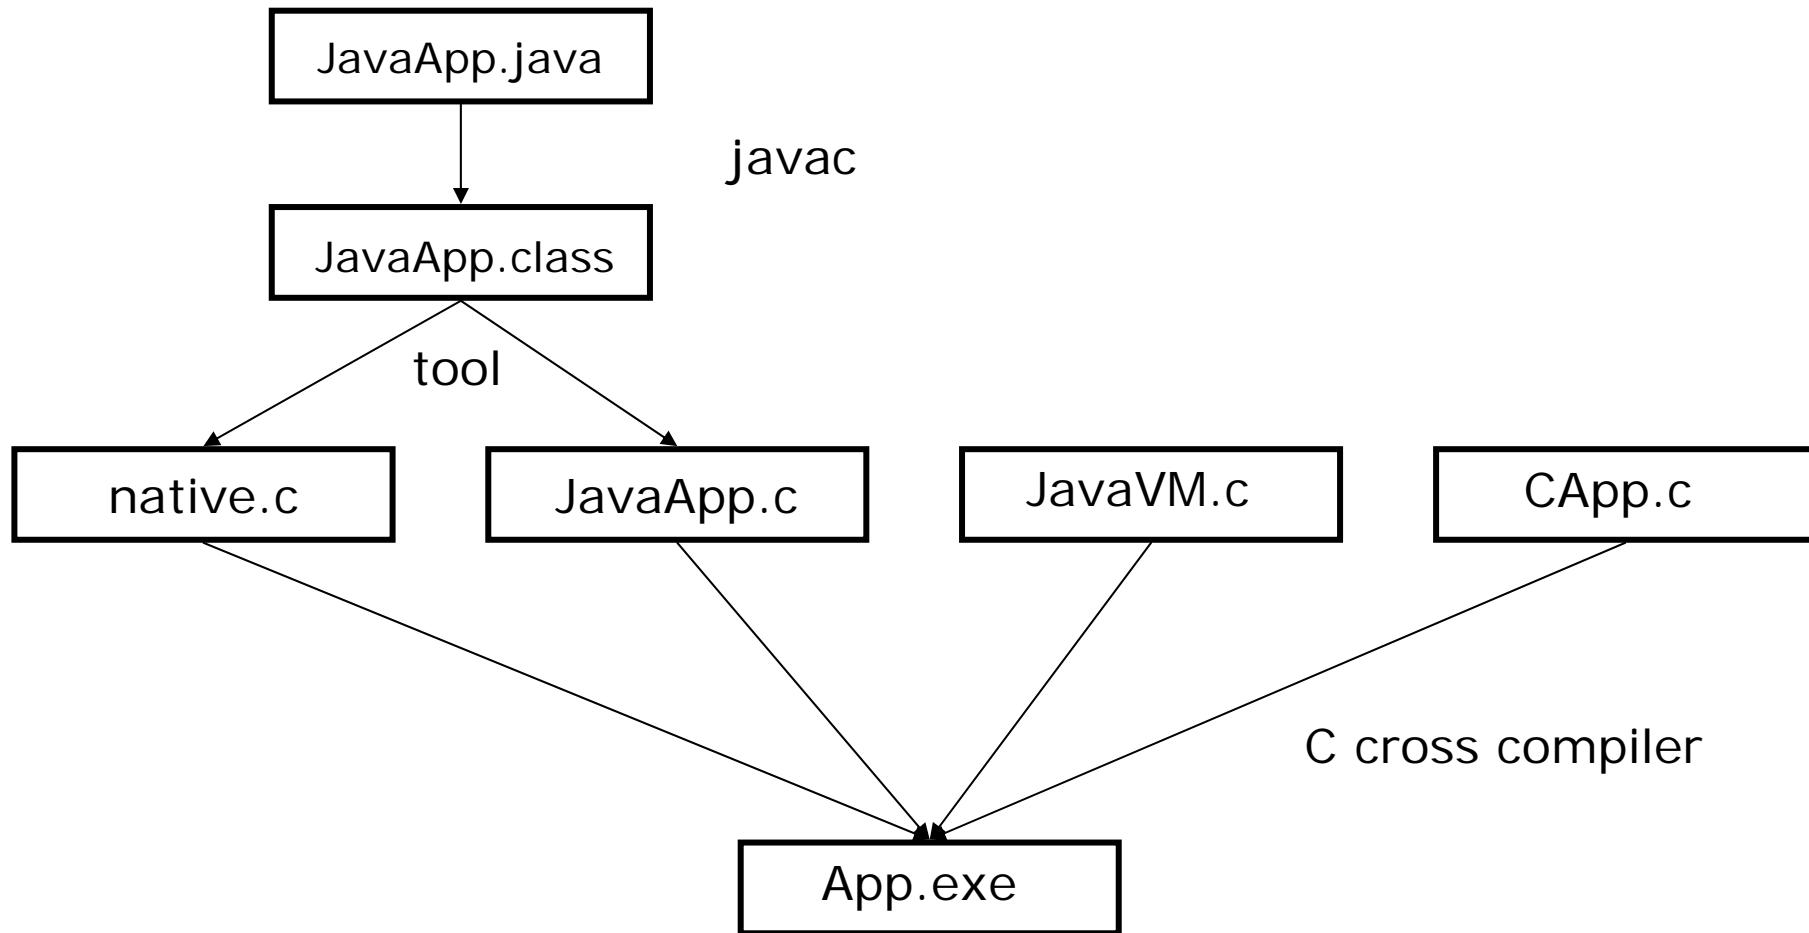

isp = Get_isp();
currentThreadState->PC = *(unsigned long *) isp;
currentThreadState->PSR = *((unsigned int *) (isp + 2)) & 0xFFF;

while (1)
{
    currentThread++;
    if (currentThread == MAX_THREADS)
    {
        currentThread = -1;
    }
    else
    {
        currentThreadState = &threads[currentThread];
        if (currentThreadState->used != 0)
        {
            threadSwitches++;
            message = threadSwitches;

Much more than a language

- Java is platform independent.
- Java is OO methods and practices,
 - Unit tests
 - Automated regression tests
 - Well designed, pretty, simple, even beautiful code.
 - Independent modules.
 - Toolboxes, frameworks and libraries.
- Java is fast prototype based development.
- Java is better predictability in software projects.
- Java is clarity instead of obscurity.

India

- CMMI level 4/5
- State-of-the art work methods
- Well educated
- Professional
- Unlimited resources

Denmark

- ☺
- Legacy code
- Legacy work methods
- Old school
- Limited resources

We need a revolution!
